4	Tasneem Hamdy dosoqi	2160007430	

Project Description:

The goal of this program is to create a digital environment that eases the organization and maintenance of a train station, by enabling the passengers to access the time table of the station, book a trip or inquire about their ticket info at any time.

By achieving those functionalities, this program will work as a conduit for passengers to access and control their trips through the comfort of their technological gadgets.

Additionally, it will combine all of the features a passenger would need to travel via train into one place that is made easy to navigate and use.
